The Hague, April 3, 2014

Dock2Office transforms every tablet into a desktop workstation

On Wednesday, April 9, the Dutch company Dock2Office will start a campaign on Kickstarter to finance the production of the Sphinx. The Sphinx is a docking station that transforms every tablet into a desktop workstation, enabling the tablet to be used comfortably with a keyboard and mouse.

Thanks to technological developments in cloud computing, BYOD, VDI, DaaS and remote desktop applications, it is now possible to open virtual desktop environments on a tablet. These days, it's hard to imagine a business world where people don't use tablets. Research has shown that 94% of companies listed in the Forbes 500 use tablets. The lack of a mouse and desktop keyboard makes it almost impossible to work on a tablet in this desktop environment, however. The Dutch company Dock2Office now offers the ultimate solution, and is using Kickstarter to launch its docking station, the Sphinx.

Thanks to the Sphinx from Dock2Office, you can work on a tablet in the same way you are used to doing on your desktop or laptop. Since the Sphinx transforms every tablet into a desktop workstation, you will no longer have to switch between your tablet, laptop and desktop. This is the ideal solution for anyone who has to work at different locations, yet doesn't want to have to take several devices along with them to do so. Dock2Office envisions the Sphinx to be used at a variety of Out Of the Home- locations such as hotels, airports, schools and flexible workplaces. This enables you to dock your tablet anywhere and get down to business, always and everywhere.

The Sphinx is the world's first intelligent docking station that uses patented Dock2Office technology. When used in combination with a mouse and desktop keyboard, this technology makes it possible to use a tablet for every business application in a virtual desktop environment.

The Sphinx unlocks the business power of the tablet, and offers the best of both worlds: the portability, flexibility and convenience of a tablet with the productivity and comfort of working on a desktop computer. The Sphinx also promotes good ergonomic posture while working, preventing problems such as "tablet neck syndrome" and "the Gorilla arm".
