Dock2Office transforms every tablet into a desktop workstation

(The Hague, The Netherlands) April 17th, 2014 - The Dutch company Dock2Office launched a Kickstarter campaign to finance the production of the Sphinx. The Sphinx is a docking station that transforms every tablet into a desktop workstation, enabling the tablet to be used comfortably with a keyboard and mouse.

Thanks to technological developments in cloud computing, BYOD, VDI, DaaS and Remote desktop applications, it is now possible to open virtual desktop environments on a tablet. These days, it's hard to imagine a world where people don't use tablets.
Research has shown that 94% of companies listed in the Forbes 500 use tablets. Also there is no doubt that the opportunities offered by tablets in the classroom are wide-reaching. Schools which embrace the technology benefit by offering more interesting, engaging lessons to a generation increasingly exposed to advanced gadgets at home.
However, the lack of a mouse and full-sized keyboard makes it almost impossible to work on a tablet in this desktop environment. The Dutch company Dock2Office now offers the ultimate solution, and is using Kickstarter to launch its docking station, the Sphinx.

The Sphinx bridges the mobile gap providing a desktop computing experience and making productivity possible with your tablet, anywhere. Since the Sphinx transforms every tablet into a desktop workstation, you will no longer have to switch between your tablet, laptop and desktop. This is the ideal solution for anyone who has to work at different locations, yet doesn't want to have to take several devices along with them to do so.
Dock2Office envisions the Sphinx to be used in the home as an extra workstation or at a variety of Out Of the Home- locations such as hotels, airports, schools and flexible workplaces. This enables you to dock your tablet anywhere and get down to your work, always and everywhere.

The Sphinx is the world's first intelligent docking station that uses patent pending Dock2Office technology. **What makes the Dock2Office technology unique** is

that any tablet can use any Sphinx to access a remote computer as long as the user has a subscription to the Dock2Office cloud server. When used in combination with a mouse and keyboard, this technology makes the Sphinx a versatile tool for busy environments like hospitals, schools or guest work offices.

The Sphinx unlocks the working power of the tablet, and offers the best of both worlds: the portability, flexibility and convenience of a tablet with the productivity and comfort of working on a desktop computer. The Sphinx also promotes good ergonomic posture while working, preventing problems such as "tablet neck syndrome" and "the Gorilla arm".

Dock2office. When tablet and desktop become one.
